Abstract

First sentence. Second sentence. Third sentence. Fourth sentence.

Keywords: south korea, birth rate, decreasing birth rate, population, aging population, regression studies, world bank

1 Introduction

Republic of Korea's birth rate is at its all time low and it has just dipped below 1 birth per women, which means that population is at a tipping point. It is the second lowest in the world, after Taiwan In this paper we examine possible reasons for it and perform regression models to further predict whether the birthrate will continue to decrease
